

# Build capacity to support new kinds of learning

Supporting the learning journey for teaching and professional staff

## Positive Scenario

Students collaborate with staff.

We have a digital strategy group with staff & learners contributing to decision making, supported by research & working collaboratively with other successful case studies.

IT Students & IT Staff support Staff in training & development

Strong connections & working collaboratively with Employers.

Continuous Staff Development & Training

Teaching Excellence is rewarded

Teachers are encouraged to have a go, experiment & take risks

All teaching staff are supported on a progression path to more advanced digital skills suited to their subject or role

All teaching staff can use our core systems to support effective learning

We have excellent digital learning resources & robust environment

## Negative Scenario

Learning resources are not digital

Students frustrated at lack of modern technology

Digital technology is not widely used.

Digital skills by both staff and students remain low

We are not using technology to enhance accessibility and enable students to access personalised learning any time, any place and on any device.

Staff are not encouraged to innovate or experiment with new tech

We do not partner with business to support our students with the right skills and employment opportunities.
